

# CO<sub>2</sub> PicnicTap®

## A BIG DAY OUT, a BIG WEEKEND, a BIG PARTY

The guests are all beer drinkers, so how do I satisfy their thirst.

Get a keg or half-keg, cool it and “pump it”.

A NICE COLD “DRAFT BEER” is very satisfying, but you usually have to be in a “pub” or hotel to get this service, right! ... WRONG.

Leland Gas Technologies now bring to sports fans or indeed any partygoers the ability to “pump” their favourite Draft Beer with CO<sub>2</sub> whenever and wherever they are having fun; all in a single compact portable unit...the Leland **CO<sub>2</sub> PicnicTap®**.

This all-in-one unit attaches to all keg sizes and gets you “Pumping Beer” in seconds, using pure beverage grade CO<sub>2</sub>.

Keg beer doesn't have preservatives, so pushing air into it with a hand pump only forces out the carbonation making it go flat in no time. Air also contains bacteria that tend to ruin the beer.

Almost every bar uses CO<sub>2</sub> to dispense Draft Beer and since Leland made CO<sub>2</sub> cylinders and regulators, this portable drafting product was born.

The unique feature of this “Beer Dispenser” is the regulator. Its single point adjustment is built right into the unit. There is no complicated set up.

After fitting the **CO<sub>2</sub> PicnicTap®**, all you do is screw in a **CO<sub>2</sub> TapGas® cylinder**, open the tap and enjoy the best tasting draft beer you ever had.

The amount of “HEAD on the beer” can be changed by adjusting the pressure using the single point adjustment knob on the regulator. A built-in calibrated pressure gauge is provided so you know what the setting is and easily repeat the experience at another time.

One-(1) **CO<sub>2</sub> TapGas® cylinder** is enough to preserve and push out a half keg when the beer is warm; however when it is cold, you will probably need two-(2) cylinders because CO<sub>2</sub> doesn't expand as much when the beer is cold.

Even so, there's nothing worse than a flat glass of beer and with the Leland **CO<sub>2</sub> PicnicTap®** assembly being used that just won't happen. No wasted beer and the party will go on long after the event is finished. Others sure will be envious once they see your set up.

The **CO<sub>2</sub> TapGas® cylinders** are easy to order in bulk (it is the cheapest way); plus they won't “go off” or “go bad” in storage; assuming they are stored in a cool, dry place.

We can arrange shipments of the equipment and the consumable cylinders to wherever you live via any courier of your choice or by using the mail system or our transport providers.

When supplied new, the entire **Leland CO<sub>2</sub> PicnicTap®** comes in a “Grab-n-Go” suitcase fully assembled with two-(2) **CO<sub>2</sub> TapGas® cylinders** at a very affordable price.

**Just give us a call and get your party started -- wherever you might be.**
