WATER-MISER

The simple, effective means for detecting rainfall and controlling many different systems such as;

IRRIGATION

SPRINKLERS

and

DUST CONTROL Systems

HUGE SAVINGS are possible, depending on how diligently & thoughtfully the capabilities of the Water-Miser systems are applied.

BIG SAVINGS in the CONSUMPTION of WATER, ELECTRICITY and/or FUEL, are possible.

EXTRA SAVINGS are possible by having un-manned operation of systems as well as being able to provide very useful inputs into SCADA systems.

SCADA and PLC systems in turn can use the inputs to great advantage; leading to significant improvements in overall system efficiencies, savings in fuel, power and water consumption as well as being a good public relations tool in showing that you care about the thoughtful control of watering systems and the overall use of water.
