

# Displaylet

USB Powered / Controlled External LCD Screen

(Image Simulated. Available May 2007.)

Don't have a monitor on those slim rack mounted servers? Is your main desktop monitor busy processing 3-D graphics?

Simply **connect Displaylet to a USB port** on your server or desktop and it will begin displaying a host of useful information.

**Powered by your computer's USB port**, Displaylet continuously displays information you need moment by moment.

**Displaylet's included software** can display IMs, sports scores, weather, stock quotes, system CPU/Memory usage, **RSS feeds**, and just about any **XML** file. You can even **code your own** app with the included API.
